SUMMARY

Results-driven Software Engineer with **3+ years** of backend and distributed systems experience at Udaan.com — India's largest B2B e-commerce platform, serving **3M+ retailers across 900+ cities**. Delivered measurable supply-chain impact: **50% reduction in CPU infrastructure, 50% faster ground picking, and 80% improvement in item accountability** through performance engineering, database optimization, and full-stack microservices ownership. Proficient in **Kotlin, Java, Python, TypeScript** and cloud-native systems on **Azure & AWS**, with a strong foundation in data structures, algorithms, and system design.

WORK EXPERIENCE

Udaan.com

Aug. 2022 - Sept. 2025

Software Engineer 2

Aug, 2024 – Sept 2025 | Bangalore

- Owned **Warehouse Management & Storage Systems (WMS)** powering Udaan's B2B supply chain across **20+ warehouses**, processing **millions of inventory events daily** — sole engineer accountable for system reliability and roadmap.
- Engineered the end-to-end **Double Dispatch logistics feature** (data models → DAO → REST APIs → UI) in Kotlin and TypeScript, enabling parallel last-mile manifest generation across multiple route batches and improving dispatch throughput by **~30%**.
- Built the **Asset Receipt Note (ARN)** system across 3 sequential phases — models, DAO/service layer, resource/client APIs — with concurrency-safe distributed locks, CosmosDB bulk upserts, and tote reconciliation supporting **20+ warehouse sites**.
- Led **database performance optimization** on Azure SQL and CosmosDB via OPTIMIZE FOR UNKNOWN query hints, forced index redesign, and access-pattern refactoring, cutting **CPU requirements from 32 to 16 cores (50% cost reduction)**.
- Contributed to the **Fresh vertical platform migration**, realigning **15+ legacy warehouse flows** with a new distributed architecture — achieving **50% improvement in ground picking times and 80% increase in item accountability**.
- Designed data archival and entity demerger jobs migrating org-level inventory across microservices, reducing active table sizes by **~40%** and cutting long-tail query latency on high-cardinality tables.
- Established **Prometheus-based observability** across **4+ microservices** — 4xx/5xx alerts, Jetty request alerts, Slack pipelines — reducing mean time to detection (MTTD) for P0 incidents by **~40%**.
- Led **parent library upgrades** for WMS: migrated from JDBI v2 → v3 and JUnit 4 → 5, resolving 10+ deprecated dependency warnings and reducing CI build failures by **~20%**.
- Implemented **retry logic, timeouts, and circuit-breaker patterns** across Picklist and archival workflows — reducing on-call escalations by **~25% quarter-over-quarter**.

Software Engineer 1

Aug, 2022 – Aug, 2024 | Bangalore

- Built an **anomaly detection framework** (Python, Prophet algorithm) integrated into the warehouse data pipeline, reducing system availability drops by **30% across 100K+ daily procurement records**.
- Resolved critical **CosmosDB throttling** by refactoring query patterns and batching bulk writes — reducing throttling events by **37%** and cutting cloud DB costs on a high-frequency write workload.
- Designed **real-time operational dashboards** in React and TypeScript for ground teams, monitoring picking

efficiency, failure rates, and warehouse health — **adopted across 5+ sites by 100+ ops users.**

- Expanded **unit and integration test coverage by 25%** across the WMS codebase — migrating **50+** test suites to JUnit 5, reducing production deployment regressions.

Enthire Co.

Jan. 2021 - July 2021

Machine Learning Intern

Remote

- Developed production ML models and REST APIs (Python, FastAPI), reducing prediction time lag by **80%** and improving accuracy from **~78% to 94%** via feature engineering with Scikit-Learn and TensorFlow.
- Built a **1-click AWS deployment module** from scratch — auto-provisioning FastAPI backends, containerizing with Docker, and rendering a Streamlit monitoring dashboard — reducing deployment setup from **4+ hours to under 5 minutes (98% reduction).**

EDUCATION

National Institute of Technology, Kurukshetra

May 2022

B.Tech, Electrical Engineering

Kurukshetra, Haryana

- **CGPA: 9.16/10**
- Competitive programmer; Electrotech Tech Club Core Member (4 years); Debate Club

Ryan International School

Senior Secondary (PCM + Economics) - 94.4% | Secondary - 10/10 CGPA

Gurgaon, Haryana

- Scholar Badges for Oratory, Diplomatic and Governance Skills

SKILLS

- **Language Stack:** Kotlin, Java, Python, JavaScript, TypeScript, Dart
- **Database Stack:** Azure SQL, CosmosDB, MongoDB, MySQL, Redis
- **Frameworks:** FastAPI, Flask, Django, Pyramid, Flutter, Terraform
- **Cloud Services Stack:** Microsoft Azure, AWS (Lambda, EC2, S3), Google Cloud Platform, Serverless
- **ML / Data Stack:** TensorFlow, Scikit-Learn, Pandas, NumPy, SciPy, Matplotlib, Docker
- **Core CS:** Distributed Systems, System Design, Data Structures & Algorithms, Concurrency, TDD, CI/CD

ACHIEVEMENTS

- Scholar Badges for Oratory, Diplomatic and Governance Skills
- **Google Hash Code 2021** — Global Rank **2,613** out of hundreds of thousands of participants worldwide.
- **HackerRank Algorithms** — Rank **3,210 / 3.4M+** (top 0.01% globally); CodeChef September Challenge 2020 — Global Rank **357 / 30,000**.
- **7 MUN Awards** (incl. 4 High Commendations) across **8 national & international conferences**, 2016–2018.
- Scholar Badges for **Oratory, Diplomatic & Governance Skills** — Ryan International School, Gurgaon (2016).

INTERESTS

Finance, economics & international affairs; competitive programming; avid reader of novels and mythology.
